Care & Maintenance Guide

Travertine Basins

Travertine is a natural stone formed by the precipitation of mineral-rich water. It has a distinctive appearance characterised by its unique textured surface and range of warm earthy colours.

I'm unique

Due to the natural formation process, each travertine basin will vary in colour and texture. Crafted by hand, each basin may have minor variations in size and shape, contributing to its unique and distinctive characteristics.

Although no two basins are identical, it is possible to choose two basins that are similar or complimentary. When placing an order, we recommend reaching out to ADP's customer service team if you are seeking two similar basins for a single space.

Please do

Wipe, Rinse, Dry

Keep it simple for everyday cleaning.

Wipe gently with a warm and soapy damp cloth or sponge, using a mild detergent.

Rinse off with clean water.

Dry with a soft towel or microfiber cloth for an impeccable finish!

Special Care

Our Travertine basins are pre-sealed to prevent water from penetrating into the stone. We recommend sealing your basin at least once a year with 2 x applications of the Defender SV and 1 x application of the Solv Sealer Gold which can be purchased from [Actichem](#). The Defender SV gives it high performance Water Repellence and the Solv Sealer Gold protects it from Oils and fats etc. This will continue to protect the surface and lengthen the life span of your basin.

Please don't

Do not use anything coarse or harsh to clean your basin such as, scouring pads or brushes with metal bristles as this may damage the stone surface and break the protective sealing layer.

Do not use any cleaning agents that contain acid, ammonia, vinegar, alcohol, lemon etc. Do not use window, abrasive or paste based cleaning products. Using any products listed above would lead to scratches, stains and the loss of the stone's natural luster.
